TD's Detect/Redirect

Hits: 3,893

Description: This is a very simple detect and redirect script. This will make sure a surfer is coming from a specific URL and then redirect them to a sponsor or your signup page (or wherever you want) if they aren't. If they are blocking their HTTP_REFERER by using an anonymizer it will still prevent them from accessing your content page. Useful for content pages that you want to protect from outside linking.

Resource Specifications
