sForm.h.php4

Hits: 3,011

Description: sForm is a form validation package consisting of several php4 classes. Its main features are complete OOH implementation, using FastTemplate for separating layout, supplying database connectivity and basic help functions. Each HTML form element is represented by its own class, extended from a standard HTML form element class, managed by a "container" form class. sForm is free for non-commercial use.

Resource Specifications
