FormMail Anti-Spam and Security Fix

Hits: 3,754

Description: This is a patched version of the popular formmail script. This script allows you to specify the list of recipient email addresses in a text file(requires read permission). The script can be used to restrict emails to be sent to the listed addresses only. Benefits: Stop spammers from using the formmail script in your website even if they use spoofed referrers. Can be used by web-hosting providers and anyone who needs to use the same formmail script to several webpages or domains.

Resource Specifications

Version:	1.0
