H-Sphere 2.0

Hits: 3,100

Description: H-Sphere is a multiserver control panel for automating web hosting tasks. It has many advanced features, a sophisticated billing system and an integrated trouble ticket system to automate and improve your web hosting service. It is designed to work on many servers and can be scaled by adding more web servers, mail servers, database servers, and DNS servers without any downtime. It provides a simple, easy to use web interface that can be maintained from any computer with an internet connection. H-Sphere is written in Java and works with any SQL-compliant database.
