Metagenerator

Hits: 1,609

Description: This is a meta tag generator that needs only 4 items to change and it's ready to run.

The generator can scan existing websites after keywords and checks the users input if is valid. If not, it will display a (customizable) error message. The generated tags will be shown on the page and sent to the user via an email. You can customize the layout and text of the program easy with templates. Includes an option to send you an email with detailed info every time it is used. Currently available in English language.

Resource Specifications
