Database Applet

Hits: 8,126

Description: Database Applet is a general java database applet for display of tabular data on a web site or CD-ROM. The applet loads a text data file and displays the content in a grid. Data is cached in an embedded database engine, which makes it very fast and easy to browse, search, filter and sort the data. No programming or cgi-scripts is needed.

Resource Specifications

Version:	4.14
