This script was really easy to install and looked to be wonderful but when I was finished the default admin password did not work. I had several friends try to install it for me, thinking maybe I did something wrong but nothing worked.

I tried to contact the author but he is not answering so another I shall use.

The software practically installs itself. I was up and running in just a few minutes and have had no problems yet. I did have a query about the use of the software (it was covered in the FAQ but I hadn't noticed) and the author replied to my email within a few hours. Pretty impressive for a freeware script.
