# PcsExplorer

Hits: 9,633

**Description:** PcsExplorer is a PHP/Javascript script which launches a "popup" window to aid in navigation and selection of a file or a folder in a remote web site. The selected file or directory is then placed in the TEXT value of a form in the calling browser window. A more detailed description can be found in the user manual.

Version 1.0 Add the support of Firefox browser (Mozilla type browsers)

This is only tool I find in the internet that I can browse remote files with dialog box. It is easy to use and config. IE fully supports it. Firefox can also work with it, although the word "Loading" cannot be shown. Mozilla fails to work.

There is a minor bug: in pcsexplorer.js.php line 32, PATH\_INFO is not always available. Use `$_SERVER["PHP_SELF"]` instead.
