Matt Wright's Random Text

Hits: 1,892

Description: Random Text is a program which takes a plain text file, which contains a series of phrases, quotes, lines of text, html tags, etc... and a delimiter (the character(s) which separate each entry) and will randomly choose one of the phrases and display it on your web page. This scripts does require the use of Server Side Includes.

Simple but does the job, Mar 1st, 2004

Reviewed By: Dioritt

This is such a simple script to set up and install that you'd be forgiven for thinking that it's not much good. You'd be very wrong! Not only does it randomise text, but you can use HTML coding within the flat text file and even have it point to graphics. An excellent little script and it's free too!
