phpGrabComics

Hits: 5,414

Description: phpGrabComics is a little program very useful to get comic strips grabbed in your site. It grabs today's strip from dilbert site. Features: display it in a web page, save in a temp file, save with FTP, save listing of your files (comic album purposes or whatever else), use different configuration files, and Web-url interface - All user functions can be called through a web interface. You can build your own extensions to the class to use it with other comic strips sites.
