HTMPL

Hits: 6,442

Description: HTMPL works over set of templates and gives users an opportunity to design web pages and web sites interactively. Those templates are actually HTML files, which are created just once. HTMPL allows to create, edit and delete pages. Using scripts, user can add his own text, graphs, links and flash movies, which template can support, into web pages. No special requirements for server, no database are needed, just HTML + Perl.

Resource Specifications

Version:	1.11
