Chatologica MetaSearch

Hits: 4,659

Description: With this perl script you can start a metasearch service from your own web-site. Everything is controled through a comprehensive Admin Panel. Supports mod_perl, FastCGI, gzip http compression. You can add more search engines to your metacrawler by making add-on modules. An intuitive module building utility is available within this software. Main features: results clustering, output results as xml feed, http proxies support, charset control for each category, multiple metasearch queries with one request.

Poor support, Aug 20th, 2005

Reviewed By: hotcontacts@cpanelgui.com

I was very serious about purchasing this script, so I sent an email message to support with 1 question. Days later I never received a response, so I sent another, I've yet to get an answer from them. If this is how they support their scripts, I want nothing to do with them and will give them no business. They lost a sale here!
