Chat Using ASP & XML

Hits: 4,622

Description: This article presents a nice little chat system that uses Microsoft's XMLHTTP Object to transfer the messages and user list. It features public as well as private modes, and is currently configured so that the browser requests the current users list from the server every 5 seconds. This article assumes that you are familiar with ASP, XML and HTML.

Disgusting, this program doesn't work, Apr 16th, 2003

Reviewed By: nbaheti

I have tried to work this code but was unable to work with it and the system was giving lot of errors, b'coz of it i have wasted my 3 days time to verify it but even my administrator was unable to understand the program written. Please check if it works over else u are sending it because u don't get any other scripts.
