**Great ALL around product!**, Jun 23rd, 2003

Reviewed By: fmontgomery

I was a little skeptical at first because compared to other applications it is just very low in price. I also dont have much experience with PHP or MySQL but I took a chance. I must say that it is GREAT! All around easy to use and manage and I had a great experience with getting support. They even took the time to setup my templates to look like my site for free. I would recommend it to anyone who wants great functionality and ease of use.

**Easy to edit**, Mar 7th, 2003

Reviewed By: maw

This piece of software is quite a favourite of mine. Lots of great features, incredibly easy to administrate, but best of all, its cheap.

However, to get the most out of sunshop, it's important you understand and are able to write php/html code, so you can tailor the system to your liking.

**Very fast and easy to manage!**, Jan 5th, 2002

Reviewed By: lagwag0n

It took only a few minutes to get my shopping cart up and running. This shopping cart offers a lot more than you would expect for the price. I would definitely recommend this one.

**Amazing piece of programming!**, May 28th, 2002

Reviewed By: blu3ad3pt1

Wow, this cart blew my socks off! I looked at all of the other \$250+ carts and none came close to sunshop! Its simple user interface is easy to use for anybody, and the Administration area is what really kicked me into buying this cart, it has all of the features anybody would ever need, and if they don't have it in there, they will include it in the next version. All future upgrades are free. As for the customer support, they are always there to help you.

**Poor tech support**, Jun 20th, 2003

Reviewed By: Bluemoondanzer

While the cart is a fairly easy to manage the tech support is lacking. It is slow and sporadic. Telephone contact is virtually impossible...on continual answering machine. Take any where from 24hrs to never to answer I find this a very poor customer support system. One minor little annoyance is the "unsecured" icon that resides in the admin section of the cart. Though it is advised by Turnkey that one use the https url to access customer cc information this little icon is an unsecured item. Now why put this in an area to which it is recommend you enter in secure mode. hmmm

Having just purchased this cart and not having the answers when I need them caused me to move on to another cart and kiss the \$139 goodbye. Lesson learned....

**Software Great, Support Lacking**, Sep 23rd, 2003

Reviewed By: tfaust

I have found this software easy to set up & use. I don't find online support available during standard business hours. Out of 10 phone calls (during their stated hours) & 3 messages, my calls have not been returned. If you plan to use this software w/real time credit card processing, make sure to ask for the add-on, that is not clearly stated on their web site and it does not get sent in a timely manner. People not familiar w/HTML & PHP might have a hard time customizing themselves.

**Slow Customer Service**, Sep 27th, 2004

Reviewed By: sf

I tried their software for a brief time, but like other reviewers found that their customer service was pretty bad for both email and phone. I am not a php guru so i needed to find another cart that provided good phone support.

**SunShop is nothing but the best!**, Sep 28th, 2004

Reviewed By: chrismathews

After looking high and low for the perfect cart for my site I finally stumbled onto this one. It is by far the best solution I have seen yet and that includes the free solutions that are out there. On top of the great software, their phone support was ALWAYS available when I needed them and I have yet to have a problem getting a fast reponce during non business hours. If you havent already tried it out, I would recommend at least trying out their demo and you will see why this cart rocks for yourself.

**Wows and Woes**, Oct 4th, 2004

Reviewed By: nicedreams242

This program definately has more wows then woes. Like any shopping cart system, users do need to put some effort into the design and features that are needed specific to theirs business. Sunshop has this. Setup does require you to know how to use FTP and how to edit a text file but most PHP applications require this as well. As far as templates for the look and feel, the advanced editor is quite nice, with the capability to use your own HTML code to implement Sunshop into almost any site design. Also if you are knowledgable in PHP, this system is expandible to any needs that any users has.

**Not holding on to it's promises**, Mar 2nd, 2007

Reviewed By: silverstar\_music

We purchased Sunshop for our new online portal. Within the testing period we realized that it didn't fit our needs, since we are looking for something more specific. We claimed the money back guarantee, faxed all necessary information in time. We never got a reply. We filed a claim at paypal to get our money back, just to find out TurnkeyWebtools doesn't give you your money back. They just advertise with it. Don't buy this shop! We've got very bad experience with Sunshop.

**It only gets better!**, Mar 16th, 2007

Reviewed By: sunnydays

I have been using sunshop since 3.2 and I have been very happy with the software up to this point. But now that 4.0 is out I am extremely happy that I made the decision to go with this cart. The new version compared to the old is night and day. Everything I ever asked them for and more was put into this new version. They really do listen to their customers request.

**Poor Company**, Apr 8th, 2008

Reviewed By: numberoneramses

Sunshop has been the worst customer service experience for me. I spent 45 minutes on hold just to get to someone, that was obviously not happy to get another call and tell me that I had to upgrade it. That's it. This is the second time the database craps out on me. I never write reviews. But this time I felt compelled to tell others to stay away from this shopping cart. There are superior options out there for the same money.
