## CommonSpot Content Server

Hits: 2,061

**Description:** As a full-featured, browser-based, out-of-the-box, Web publishing and dynamic content management solution, CommonSpot Content Server allows end users to easily participate in the efficient creation, management and delivery of Web content, without the help of a Webmaster. CommonSpot's flexible template and data-driven architecture, granular access controls and a multi-level approval workflow process, give content managers control over the integrity and structure of the site, while greatly simplifying overall content management. Developers appreciate CommonSpot's open and extensible architecture, enabling fast and seamless integration with existing Cold Fusion applications and custom modules.

We have just completed developing a content management system for a City Government intranet/web site using CommonSpot.

We found the tool to be powerful, fairly well supported and most importantly for our diverse client range, flexible.

With it's hierachical structure (uses template scenario) we found it very quick to develop standard pages that the specific categories of content would be built on.

We had quite a lot of dialogue with PaperThin who were of great assistance during our initial development. Now a partner please feel free to contact us with any queries you may have regarding this product.
