# ARSC Really Simple Chat

Hits: 34,518

**Description:** ARSC is an easy to install, simple to handle, cross-browser compatible chat system with its own socket server. If you have a modern browser with frame support and JavaScript enabled, ARSC makes use of these technologies. If you have an older browser, or you have JavaScript disabled, or even if you have a browser that doesn't support frames, you can still chat using ARSC. Unlike many other PHP/MySQL webchats, ARSC can be run using a non-forking socketserver to handle all message transport. The socketserver of ARSC works very resource-friendly and can handle way more users.

## Resource Specifications

<b>Version:</b>	3.0.2-rc2

**Very innovative script**, Jan 14th, 2002

Reviewed By: slim

It runs very well for my site. I have a steady load average of 35-45 users, and with sockets enabled I have a much smaller server load than with any other scripts I have used.  
great script!
