# TSguestbook

Hits: 3,237

**Description:** This guestbook script is designed object oriented. The features of the guestbook are specified in class\_guestbook.php. On demo.php a new guestbook object is created and different operations are processed via this object (displaying the entries, adding a new entry, etc.). Some basic functionality is given through class\_support.php. Code and layout are separated through templates. The data is stored in a text file, there is no need for a database.
