# compactHTML

Hits: 1,446

**Description:** compactHTML is a configurable command-line tool for reducing the size of HTML, PHP etc text files. By removing extra white space, tabs etc you can get significant reductions in size. If pages are downloaded thousands of times then this reduction become even more important - saving on bandwidth while improving speed. Over 20% size reductions have been seen, average is between 10-18%.

## Resource Specifications
