kPlaylist

Hits: 57,204

Description: kPlaylist is a PHP based music database that makes your music collection available via the Internet. With kPlaylist you manage audio and access your music (ogg, mp3, wav, wma, etc.) via a web based interface where you can stream music, upload, make playlists, share, search and download your music from anywhere by just using a webbrowser. kPlaylist is multiuser based and supports more than 30 languages.

With kPlaylist you can share your music with friends, family and colleagues. Search for your music in the database and set up playlists of your taste or share them to others. Use kPlaylist to publish music and video samples on your website. Downsample your mp3 files, on-the-fly (using LAME) during streaming when you are on poor Internet connection.

First I figured I would try kPlaylist. I uploaded a single song to test it out, then a couple, then at the end of the week ended up with over 41 Genres, 219 Artists, 134 albums, and over 800 Songs! Thats 3.2 days worth of music. I gave a bunch of people access and they started lisening away with the streaming option. I turned downloading off to make sure things stay legal. I just love this handy little script. I rate it 5/5 for sure. I reccommend you give it a try. Note:*ALL MY MUSIC WAS LEGAL
