PHP Accelerator

Hits: 5,168

Description: The PHP Accelerator provides a high performance caching/optimising solution capable of accelerating PHP scripts by typically 2 to 4 times, although over 9 times has been reported on some large sites, and rivals the best alternatives. In addition PHPA can be very effective at reducing load average and reducing file I/O because cached scripts executed from a specially designed shared memory cache. A simple code optimiser is also built in, gaining some extra performance and reducing code size. The new release is free of activation keys.

Resource Specifications

Version:	1.3.2
Platform(s):	Linux, Solaris, FreeBSD, OpenBSD, BSDi
Price:	Free

Seems really simple and powerful !, Nov 21st, 2004

Reviewed By: moon06

Just a few minutes to install it, and it already works on my webpages !

I did not yet test it's performances but they seem to be very good.

Thanks guys !
