# Qiksearch MenuGen

Hits: 4,948

**Description:** Qiksearch MenuGen is a simple and handy tool that lets you create Javascript drop-down/pull-down menus with ease. To use Qiksearch MenuGen, first select the number of Items you want in the menu. The default is 5. Then select the caption that will appear in the menu. Default is "Select". Then fill in the details of the Items. "Option" is the text that will appear when you pull the drop-down menu. "Link to" is the link to which that particular "Option" will point to. You may type your own link/URL or browse through to link to a local file. After you are done with all this, press the "Make My Code" Button. A new window will open, with the code you require. Press CTRL+A or right click and Select All, then copy the text and paste it wherever you require on your web page.
