Document Hide and Track

Hits: 4,845

Description: With this script you can "hide" a document and/or file, embedding it in a php script. This is useful to avoid direct linking and to track each visitor (so it is useful also as a download manager). To access the "hidden" document user must insert his name and email: each access is logged with an email and a file logging (csv compliant).

Resource Specifications

Version:	0.1.1
Platform(s):	Unix, Windows, Apache, php
Price:	Free (GPL)
