Mail-it Now! Upload2Server

Hits: 9,231

Description: Advanced form2mail enabling your visitors to send you an email after the submission of a form. The email and message fields are checked, as well as the validity of the email address. It works with every hosting using the mail or email functions. Handles multiple file uploads (this option can be turned off). One single file, both form and reply page. The reply page is automatically generated. Supports Online.net and Nexenservices.com. Supports safe-mode servers and PHP > 4.1.2 (new PHP arrays). New email validator (includes the new TLDs).

Resource Specifications
