## 6.0 CF ListServ Application

Hits: 1,796

**Description:** This is a powerful ListServ application for creating and maintaining email lists. It is very portable and easy to integrate into any Cold Fusion application. The ListServ application allows administrators to add and remove users at any time. It features very simple administrative functions that are all password protected to prevent unauthorized use. Once the administrator has logged in, he/she can create new email lists, update lists, add new subscribers, manage current subscribers, and more.
