Opera Hotlist To HTML

Hits: 4,603

Description: The purpose of this class is to create an html output out of an Opera hotlist file on the fly.

You can just upload your Opera hotlist file and the bookmarks on your homepage are automatically up to date. No need for changing any other files every time. Using template properties you can adjust the structure and design of the output html code. Set the "folderfilter" to filter out folders matching this pattern (used by preg_match).

Resource Specifications

Version:	1.1
Platform(s):	Win32, Unix, maybe other
Price:	Free (LGPL)
Date Added:	Apr 19th, 2002
Last Updated:	Jun 24th, 2003
