# IPPlan

Hits: 13,611

**Description:** IPplan is a web based, multilingual, IP address management and tracking tool based on php 4, simplifying the administration of your IP address space. IPplan can handle a single network or cater for multiple networks with overlapping address space. Updates: This release features a completely new look and feel with many user interface improvements. It adds linking of addresses to allow handling of NAT. There were many DNS administration improvements, so that users can now import DNS zones via zone transfers. Users can split and join networks, and quickly scan subnets using nmap, and external poller and trigger handlers were added, as was a feature to probe addresses before assigning, area/range modifications, better statistics of address space usage under findfree pages, improved handling of Apache virtual hosts, and a better audit log.
