Amazing Genealogy script. Easy to use, good support, free upgrades!, A

Reviewed By: kloetstra

I have done a lot of searching for a script that would enable me to publish my family tree on my own website without the restrictions of Ancestry.com or other public Genealogy sites.

This script was easy to setup and get going. Darrin provides awesome tech support for the script and is always working on improving it. Free updates help so that I didn't have to pay again to get the script improved.

All in all, in the couple months that I've been using the script, I've found that it's the best Genealogy script around and it's very versatile for any size of tree or any layout you want on your site.

Excellent Genealogy Script!!, Apr 9th, 2003

Reviewed By: n2972s

This has been by far the best genealogy script I have seen. Easy to install and easy to use, yet has all the features you could want and more.

I just wish this script had come out a few years sooner!

Great script.

Best genealogy web site software on the market, Apr 8th, 2005

Reviewed By: cray4348

After years of hand-coding a 2,000+ page web site and making myself crazy in the process, I came upon TNG. After seeing it for only a few minutes I went to Darrin's site and checked out the details. When I did I couldn't wait to buy this software.

I was able to replace my original web site in only a few days, allowing me to avoid spending weeks to revise and update the old site. This software is worth every penny and more!

This program ROCKS !!!, May 26th, 2005

Reviewed By: droidd

This is THE best genealogy website building program out there! I have tried many other programs and this is THE most flexible and easy to use. Try it and you will buy it.

TNG 5.1, Feb 3rd, 2006

Reviewed By: KenCRoy1

TNG is the best software for building a genealogy site. You can easily add your own history or family pages into the TNG generated scheme in multiple languages.

TNG automatically suppresses details on living individuals. Registered users can view the living persons details but restricted to their allowed branch within the genealogy tree.

TNG with a MySQL database is the best way to dynamically present one's genealogy research. I would strongly recommend the software.

The Next Generation, Aug 15th, 2006

Reviewed By: Stegemüller

From my point of view this is the best possibility at all to share genealogy and family history at the Internet. I've used it for a couple of years and can recommend it for the easy set up and thousands of possibilities. Darrin made a great job - for ridiculous money. Sorry for spelling mistakes, but I'm Danish.

The Next Generation of Genealogy Sitebuilding by Darrin Lythgoe, Sep 1

Reviewed By: sabden

I read the review of this programme in the Family Tree Magazine in the UK and decided to risk buying it. If you are unused to dynamic databases it can be a bit scary but the support you get from the author himself is incredible. Along with this is a comprehensive set of on-line forums where enthusiastic and helpful folk share their experience. I'm really looking forward to exploring its potential. With the strength of the pound against the dollar at present, it's a real bargain. Go for it!

TNG v5 and v6.01, Oct 14th, 2006

Reviewed By: cray4348

I can't say enough about the quality of this application or its author. I have NEVER had user support as good as this. I have never waited more than 2 hours to get a reply from Darrin, no matter the time of day.

TNG has made site maintenance an absolute breeze compared to other programs. Before using this I was faced with a 2000 page + upgrade on my old site. Now I can make major revisions in less than an hour and add 100's of images in a day or two!

This is a must for genealogists on he web!

Great genealogy web site software, Oct 31st, 2006

Reviewed By: cray4348

I've used TNG since v.4 and Darrin just keeps on making it better and better! I have never seen ANY company provide the type of user support that Darrin provides.

This is the greatest thing that ever happened to online genealogy since the invention of the Internet.

Wonderful product and support at a great price, Dec 14th, 2006

Reviewed By: mlmckenzie

It's rare to find a product like TNG. Not only are the scripts excellent, the customer support is unparalleled. This lets me concentrate on my research rather than spending my time creating individual pages for each person in my family database. Plus, it's all automatically linked together. It's low maintenance and extremely powerful. Add to the mix an enthusiastic email list and forum, with many addons and great ideas shared. I've been extremely happy with TNG and I highly recommend it.

Awesome program and customer service, Jan 13th, 2007

Reviewed By: kyamcg

I wanted to incorporate a database of my family genealogy records to my website and found Darrin's The Next Generation of Genealogy Sitebuilding (TNG) program. I really liked the interface and multiple template options. Despite not knowing PHP or SQL, the installation was easy and so was changing the CSS to match my existing theme. Any questions I had were quickly answered. I highly recommend this program. – Dalena, <http://www.gone2texas.us/Genealogy/index.php>

TNG 6.1.0, Sep 3rd, 2007

Reviewed By: mickessex

Excellent!!

This program is very easy to use, both front and back end. Extremely easy to install, customise and populate with your genealogy research. Ideal for the 'noobie' or the accomplished webmaster. As for the price of the licence, Extremely cheap for what you are getting in return. This is the best value program I have ever purchased.

Summary:

Excellent code.

Very customisable (or use virtually as is).

Very easy to install and use.

Great value for money.

Highly recommended.

TNG Genealogy Software, Jul 6th, 2008

Reviewed By: martyd

If there is a finer genealogy software available anywhere, I have yet to learn about it. If there is better support anywhere, I have yet to hear of it. The product and its author offer a way to have your genealogy on the Internet yet keep it free for commercial use by others. Instead of everyone having their own version of a genealogy on their computer, families can access the same database and grow their genealogy together. Whether an amateur or serious genealogist, TNG is for you

Great Software, Jul 11th, 2008

Reviewed By: tennesseechit

I have been using TNG for 2 years and am very pleased. The Program is easy to use and fully customizable even for a Beginner...The Upgrades are well planned and easy to install. The Tech Support is "Unmatched Anywhere" ...The User Forum is a great place for ideas and information. If your looking for a Genealogy Software that both you and your members can use and enjoy...I can't think of a better one. It's Worth Every Penny!!!

The Next Generation in Genealogy Sitebuilding (TNG) is the most advanced family history Web site development application available. Rather than the canned and stilted output from typical Gedcom-to-html converters, TNG maintains all of your data in dynamic databases. Using a variety of templates and styles, it's easy to create a highly customized, interactive family history Web site befitting your remarkable work. The features and functions - all customizable - are too many to list.
