Editize

Hits: 23,888

Description: With Editize, even the company CEO can update the company Website. Imagine, as a Web Developer never again being asked to transfer text from a company brochure onto the site; correct a spelling mistake; bold a sentence; add a link or an image; or even create a table? Editize is a portable, professional and customizable browser-based content editing component that will drop straight into your Content Management System. Editize simply replaces the TEXTAREA tag in any Webpage, and it works with all browsers and all content management systems and it's XHTML compatible.

Why Java? and where are the features?, Jun 23rd, 2003

Reviewed By: php_authorize

Why can I only create red text? This product is seriously lacking features of others such as Ektron and RichTextBox. They say you can use it cross-platform -- yes, if you want a 5mb java download. It's slow, has WAY too many bugs and quirks, and I emailed their support guy and it took 2 days for a reply. Hmmmm. I thought sitepoint were meant to be good?
