SourceGuardian 7 PHP Encoder

Hits: 5,903

Description: SourceGuardian 7 PHP Encoder is the ultimate protection solution for your PHP scripts. Version 7.0 introduces a host of new and enhanced features. SourceGuardian has become an essential tool for many web developers and programmers, offering the ability to protect their PHP code and therefore their intellectual property. The new version contains all of the same useful features customers have grown to expect, including bytecode encoding, time limiting scripts and locking to specific domain names or machines. However, 7.0 further enhances functionality allowing for protection of non-PHP scripts, including the popular Smarty templating system. Other enhancements include a faster encoding engine, additional security layers and a richer, more intuitive interface. We have Windows, Linux & Mac OS X encoding clients and a Command line encoder. SourceGuardian 7 PHP Encoder is the most comprehensive and user-friendly protection solution on the market. A free 7-day trial is available.
