Math Writer

Hits: 2,172

Description: MathWriter is a java stand-alone program for creating Mathematical, Scientific and Engineering equations and formulae. School teachers and Lecturers will find MathWriter useful for producing notes, reports and test papers. The program is designed so that an expression may be written on the screen and then translated into a bitmap image of required size. This image may then be subsequently imported to a Microsoft Word document as a "picture" or incorporated into a Web Page as an Image.

Resource Specifications

Version:	1.0
Platform(s):	Windows 95/98/2000/XP/NT
Price:	Free Trial/\$14.95
