Presenting XML

Hits: 2,290

Description: Presenting XML is a Java web application framework for presenting HTML, PDF, WML etc. in a device independent manner. The framework supports a flow of content (XML files, flat files, SQL, dynamic XML) through SAX pipelines and XSLT transforms to a device. It runs as a servlet in a web environment and also as a console app. It can be used, for example, to transform flat files into XML, to transform XML content into multi-part MIME mail message, to transform XML into PDF, to generate HTML web pages, etc.

Resource Specifications

Version:	0.8.4
Platform(s):	Unix, Windows (JAVA)
Price:	Free (MPL/LGPL)
Date Added:	Jul 25th, 2002
