AJLogin 3.3, Apr 23rd, 2003

Reviewed By: VampyrE

AJLogin 3.3 provides a simple yet effective way to setup basic authentication across your site. This application is designed to be used by absolutely anyone running a website. It requires very little knowledge or time to get it up and running. This app is best suited to small-business or home intranets or websites. It would also work quite well for just tracking membership across a site. Not really suited for large sites, but with a little work you could modify it to suit your needs. The source code is well commented and cleanly written, a big bonus these days. A good looking system, easily modifiable, free, and quick to setup...What more could a developer ask for?
