# Password Manager

Hits: 4,162

**Description:** Keep all your account information with user id,password,url and notes information in one place. With PasswordManager, you can organize passwords in multiple files. Data files will be encrypted. Each and every file has to be assigned with a password which will be asked when the file is open for viewing/editing. You can choose to store any personal data which can be stored in tabular form. This also includes a flexible and configurable random password generator.
