## Compare & Backup

Hits: 724

**Description:** Many people often backup important documents or favorite songs, pictures to another disk or another directory. If you do this, how can you make sure that you will not overwrite important files by outdated ones? If you lost some important files, how do you restore them - copy the backup directory back or restore them one by one?

Compare & Backup is an easy to use backup software which allows you compare source with destination before you do any copying or deleting operation. Compare results are shown in 5 sections:

- 1) Newer than destination
- 2) Older than destination
- 3) Can not find destination
- 4) Can not find source
- 5) Only size changed

So you can exactly know what the different is between source and destination. Then you will know which files need to be backed up, which files need to be restored, which files need to be deleted. And Compare & Backup can do all those operations for you.
