## Bandwidth monitor for IIS

Hits: 5,956

**Description:** Monitors how much bandwidth each domains hosted by IIS web server running on windows or NT server is using. Provides future usage assumption based on current usage and many other features.

There are two releases. One is a commercial IIS filter component designed for web hosting providers and data centers. The monitor produces sorted usage records for every domain running on the server.

The other version works as a log scanner and usage monitor, checks how much bandwidth each domain hosted by IIS web server running on windows or NT server. Shows current usage and monthly usage rate, provides future usage assumption based on current usage and many other features. Can stop and restart sites exceeding monthly or daily usage rate.

### Resource Specifications

The developer wrote me today and said work has stopped on this software. My advice is look elsewhere for supported software.
