br_form2mail

Hits: 3,264

Description: br_form2mail is a light-weight, powerful and easy to use script programmed with the basic web designer in mind. This script allows you to get a HTML form from your website to your inbox. I have also gave you the power to set up required fields along with many validation types, to ensure the users' input is correct before getting your inbox. Validation types include: blank, email, letters, numbers and age.

Resource Specifications
