This is by far one of the best products I have purchased today. You can buy it "as is" or get it completely customized. What makes this script incredible is the support. I went ahead and paid them twice because I felt guilty for all the support they were doing. They respond quick and their knowledge in the products capabilities is amazing. They are true php developers. If support is a major concern in buying it, that's the least of your worries. You can use this script for any directory.

phpMyDirectory is the best php yellow page/directory php script of its kind, and keep getting better and better.

With the simplicity and flexibility of the script I was able to customize it and apply my own GUI interface with no hassle without php knowledge. And when I need help for customizations, their support has been more than satisfying in getting the job done for an excellent price if not for free. phpMyDirectory and its support team has reached a level far beyond my initial expectations.

They must be losing a lot of business!

Since my last posting PHPMYDirectory have contacted me and I have purchased the script. Within 30 minutes they installed and set-up the script on my server.
