PostWrap

Hits: 6,068

Description: PostWrap is a PostNuke module that enables virtually any web content such as html, scripts (home pages, galleries, shopping carts, php, perl, asp, etc.) to be easily incorporated into your PostNuke site. Just call the PostWrap module with any URL and it will display it in your PostNuke main area/window. I call it a content wrapper (takes any existing content anywhere and wraps your PostNuke site around it. Uses an iframe which must be supported by the browser and JavaScript to resize the iframe (optional).

Now with new options in the admin and a block to show yor links.

Good Mod, Feb 3rd, 2003

Reviewed By: nerdbyte

Post Wrap is a good Mod for PostNuke. It lets you easily add any page into a postnuke frame. it also allows url security and url aliasing meaning if you have a page www.yoursite.com/content/text/peanut.html , you can alias the page to make it show www.yoursite.com/peanut.html. Realy neat mod.
