Passport

Hits: 2,602

Description: Passport is a multidomain user authentication system with password reset, basic information collection and user records update. If you are going to use it for one domain name portal, the encoded user related information will be delivered through domain cookies. Note: your web server does not need to be on the same domain to get the user authenticated. This application passes encrypted information through http request without using cookies. Just register your self, download demo on your server and play with that.

Resource Specifications

Version:	1.28
Price:	\$25.00
Date Added:	Dec 18th, 2002
Last Updated:	Mar 5th, 2004

Average Visitor Rating:  **5.00** (out of 5)
