# pkGuestbook

Hits: 3,164

**Description:** The pkGuestbook module, as its name suggests, supports a standard guestbook on your site.

It allows visitors to post comments and opinions (optionally, they can also enter their name, email and web addresses and geographic location). The i.p. address of the user is also internally logged. When a new entry is made, the application sends you an alert by email. You can then log into your administration and edit or delete any entry.

## Resource Specifications
