# Reystar CoolBanner

Hits: 2,206

**Description:** This applet takes any number of banners (468x60) and rotates them in order using different cool transitional effects to hide one and display the next. The user of this applet can set the number of banners to be rotated, the speed of the transitional effect, the time for a banner to remain shown before the next rotation, whether to display a border or not when banner is selected, and if a border is used, the border color.
