phpWebAlbum

Hits: 17,449

Description: phpWebAlbum generates your photo album on the web. After installation it's as simple as dropping your JPEG photos into a folder on your webspace and everything else is generated by phpWebAlbum automatically! The main features are: automatic thumbnail generation for images and folder content, built-in user management to restrict access to certain folders, localization via language files (english and german shipped), edit and display photo description and show photo view count.
