# CJ Dynamic Poll

Hits: 17,497

**Description:** The CJ Dynamic Poll does exactly what it says in the title - it is a poll that changes dynamically. Ever wondered how websites can display poll questions one minute then once you have voted display the results in the same place? This script does just that! Includes IP blocking, archiving, graphical display all through an admin control panel, a must have for all websites.

A professional version of this script is available, allowing for comments and auto archiving. See web site for more details.

### **A great script.**, Dec 24th, 2004

Reviewed By: malephika

I've spent quite a long time searching for a poll script and I'm happy to say that this was the one I ended up choosing.

It is extremely easy to use and, although the html code generated isn't the best in the world, it is also very easy to modify even by those who aren't quite familiar with PHP (which is my case).

Thumbs up for this script.

### **Great System**, Apr 6th, 2005

Great little script with easy instructions, fully customizable and best of all... GREAT TECH SUPPORT. Yes, even though it's a freebie, they'll answer all questions and even tell you how to rewrite the code for your particular application. Check out their website forum. You'll see how many people ask for custom modifications like "can you change the font/format/etc" and they always respond within 1 day. Fabulous. If I wasn't such a goddam cheapskate I'd donate to their site.
