FlexJSPLink

Hits: 3,019

Description: JSP version of Flexphplink. Written in JSP and Mysql, FlexJSPLink is easy to add, edit or delete links to your site. Subcategory link definition is allowed. This is also a great resource to add to any website as it allows your visitors to exchange links with you. There is also an admin system to create the categories, and edit the existing links. Low price customization service also available.
