raSMP

Hits: 4,724

Description: raSMP is a fast, easy to use content management system written in PHP supporting either MySQL or PostgreSQL as it's database backend. raSMP's emphasis is on speed and customisability. It offers webmasters a chance to administrate their site entirely via a multi-user web interface. Features include separation of headers/footers, multiple templates, multiple admin accounts with defineable permissions, category based page system, IP banning (with IPv6 Support), an internal admin to admin messaging system, detailed site statistis and much more.
