ht://Dig

Hits: 3,364

Description: The ht://Dig system is a complete world wide web indexing and searching system for a small domain or intranet. This system is not meant to replace the need for powerful internet-wide search systems like Lycos, Infoseek, Webcrawler and AltaVista. Instead it is meant to cover the search needs for a single company, campus, or even a particular sub section of a web site. As opposed to some WAIS-based or web-server based search engines, ht://Dig can span several web servers at a site. Some of its main features include: Intranet searching, Support Robot exclusion, Boolean expression searching, and Configurable search results.

Resource Specifications

Version:	3.1.5
Platform(s):	Unix
Price:	Free
