Gallery Script

Hits: 25,003

Description: This script creates a gallery from a folder of images. Just upload a directory with pictures and thumbnails to your web server by FTP. No database is needed. It lists all the images in a directory and links them so they open in a 'viewer' window. The images are sorted alphabetically by default. A custom order can be defined within a text file. The script is able to count and display the image views as well as text captions.

The layout is template driven and easy to customize. The URLs are search engine friendly with only a question mark and a number (.../?42).

at last. Log and count image views, multi-language support and others. perfect.

You will not be able to use this right away., Mar 21st, 2007

This program has terrible instructions and you will not be able to immediately use it. You will need to invest a lot of time figuring out how to get this program to work. You will have to open the scripts in a text editor and manually alter the code just to change the way the images are displayed. This program is a cheap imitation of XnView or Irfanview, you'd be better off using those instead and upload your pictures as a web page. I would not recommend this product. There's better out there.
