singapore

Hits: 53,971

Description: singapore is a flexible and professional-looking image gallery that does not require a database. Available in over 20 languages from Bulgarian to Vietnamese, it is fully template-driven which allows an almost infinite variety of presentation styles. Thumbnails are automatically generated using GD or ImageMagick and cached for increased speed. While it features a fully fledged web-based administration interface supporting multiple users with gallery read and write permissions, it is equally possible to upload and delete images and galleries using nothing more than an FTP client. It produces standards compliant XHTML and CSS output.

This gallery is nice and simple. The newest release fixes an annoying bug that didn't allow you to upload via the admin interface.

I'd like to see more functionality through the admin interface, as it only has a couple of simple functions. It also needs to include a few skins along w/ a selector tool.

Easy install however, and very clean, professional look.

Beautiful, simple and finally easy..., Jun 22nd, 2003

This script is really easy to configure, and is useful without any modifications. But changes can be done really easily by changing values in *.css files and if you are easy with "php" you can change so many things. (apologizes for my english, I'm french ;-)

Singapore Photo Gallery, Aug 20th, 2003

This was the simplest Photo Gallery to Install. FAST photo uploads via Browser interface and even faster thumbnail creation. The Gallery Directory and Sub Gallery Directories are a little confusing, but only for a second. Easiest install ever! It even told me that I didn't have the GD installed, but it did find the ImageMagick and reminded me about setting the CHMOD levels. Too easy! Simple to read INI file. Couldn't be any easier! TRY IT!
