# TrailScout

Hits: 3,891

**Description:** A cookie-based PHP script that displays a path of hyperlinks to previously visited pages on a website. For example "Vacilando.Net > Writing > PHP Scripts > TrailScout" (see at the author's website above). It is also known as "cookie crumb trail". None of the similar programs I've found around the Web was good enough, so I decided to write my own. The path is stored in a cookie for the duration of one session (= until you close all your browser windows). For each new visited page, the title (fetched automatically from between your <TITLE></TITLE> tags) and the url (complete with parameters) is stored in that session variable. If user visits a page that s/he has seen before, the trail of links is reduced and that page again becomes the last one in a row. There is a variable that can be used to limit the max number of links to be stored (this is useful for large sites where trails tend to be too long).

## Resource Specifications

<b>Version:</b>	1.8
<b>Platform(s):</b>	linux, windows, freebsd, osx, sun
<b>Price:</b>	Free (GPL)
<b>Date Added:</b>	May 28th, 2003
<b>Last Updated:</b>	Mar 24th, 2005
<b>Author:</b>	Tomas J. Fulopp
