AI Flash In

Hits: 3,476

Description: Flash-inside ASP.net component allows you to include a Flash-movie on your Webform with a few mouse clicks. You can parameter all the Flash player native properties. The swf selection to play is activated through a standard dialog box. Sizing and positioning are done with the mouse and moving is played at design-time.

With Flash Inside, you can use a click event. A click event in the flash movie can be handled in a webform by adding a few code in the movie. You can add a sensitive area (using a clip or a button).

This actionscript code cause the page to be posted back to the server, throwing the serverside click event on the FlashInside control.

Resource Specifications

Version:	1.0
Platform(s):	Windows 2000/2003/XP Professional
Price:	Freeware
